Consiglio Nazionale delle Ricerche

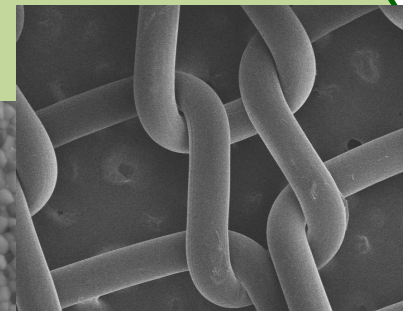

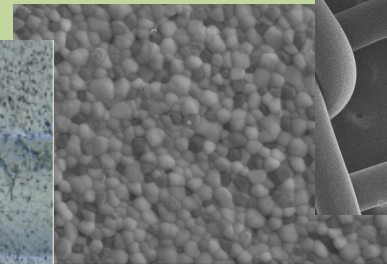

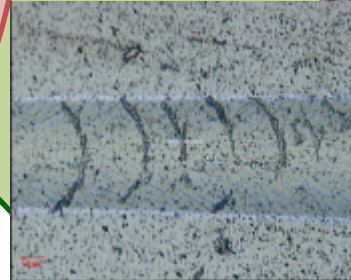

TECHNOLOGIES FOR HEARTH MOVING MACHINES

TECHNOLOGIES FOR AGRICULTURE

MATERIALS

50 people, 4 sites

Ferrara
(headquarter)

Torino, Area della Ricerca
(Strada delle Cacce 73)

Candiolo (TO)
Vehicle testing site

Vezzolano (AT)
Experimental farm

Agreement:

- Politecnico di Torino
- Università di Torino

Main streams of activities

- Biomedical & Wear Resistant Material
- Noise, Vibration and Comfort
- Sustainable Agricultural and Mechanization
- Safety Assessment and Standards
- Machine Design, Operation and Testing

MATERIALS

Eco-friendly machining and characterisation of difficult to cut materials (biomedical and aeronautic/aerospace applications).

Friction and wear properties of bulk and coatings.

Development and characterization of polymer composite for biomedical and sensor applications.

Sustainable Agricultural

Promotion of management techniques for the protection and sustainable use of the soil:

- Water erosion
- Soil compaction by traffic machinery
- Organic matter loss
- Biodiversity decrease

Reduction of the environmental impact from bio-wastes :

- aerobic stabilization process
- mechanical processing techniques for the agronomical uses
- study of unconventional applications

Noise, Vibration and Comfort

❖ Advanced measurement techniques

- sound intensity
- modal analysis
- laser vibrometry

❖ Active noise and vibration control

❖ Sound quality

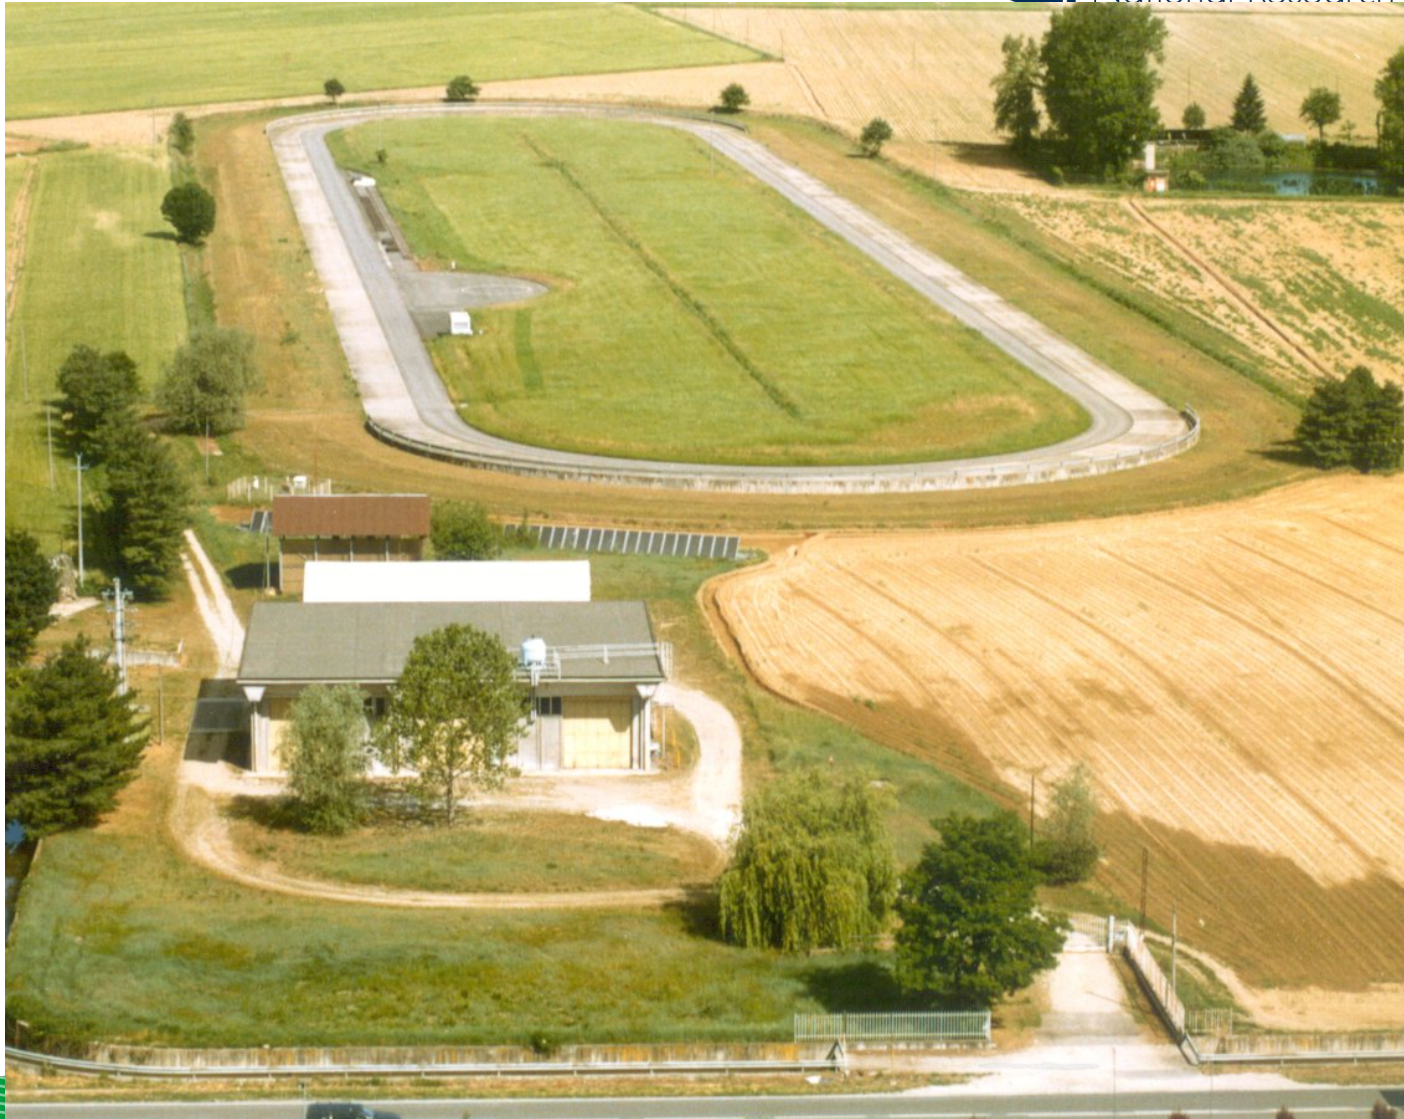

- improving the operator safety and comfort

❖ Computational advanced tools

- vibroacoustic design of machines and components

Machine Design Operation and Testing

- ❖ Design, manufacture and tests of prototype of off-road vehicles and machines for agricultural purposes
- ❖ ROPS and FOPS tests
- ❖ Ergonomics assessment: focus group, field surveys and observation, user-centred-design method, user scenarios, usability evaluation

planimetry detail B scale 1:100

measure in m

- existent
- new plan
- - - property limit
